SUMMARY

Computer Science student (B.S., Data Engineering concentration) graduating December 2026, seeking an entry-level software engineer role in Northeast Ohio. Builds software that talks to hardware: led a distributed Raspberry Pi sensor network deployed for Kent State's Department of Agriculture, and is building a vehicle CAN bus telemetry system on embedded Linux. Internship experience supporting IT infrastructure across a large public school district. Python, C/C++, SQL, Linux, Git; fluent in English and Russian.

TECHNICAL SKILLS

Languages: Python, C, C++, SQL, Bash

Frameworks & Libraries: Flask, Streamlit, pandas

Databases: Relational databases (SQL), relational database design, MongoDB

Platforms & Tools: Linux/Unix, Git, GitHub, Raspberry Pi, SSH, VS Code, REST APIs, SocketCAN

Practices & Concepts: Data structures and algorithms, object-oriented programming, ETL / data pipelines, embedded systems, sensor data acquisition, unit testing, code review, Agile sprint planning, technical documentation, troubleshooting

Spoken Languages: English, Russian (fluent)

EDUCATION

Kent State University — Kent, OH

B.S. Computer Science, Data Engineering Concentration; Minor in Russian | Expected 12/2026

Relevant Coursework: Data Structures, Algorithm Design & Analysis, Database Design, Software Engineering, Operating Systems, Programming Patterns, Big Data Analytics

PROJECTS

Horticultural Environmental Monitoring System | Team Lead (Year 1), Project Stakeholder (Year 2)

Kent State University Department of Agriculture | Python, C, Raspberry Pi Pico, Linux, SQL, Git

- Led a team of student engineers designing and deploying a distributed temperature and humidity sensor network for Kent State's Department of Agriculture to support horticultural research
- Architected the data collection pipeline: Raspberry Pi Pico sensor nodes transmitted readings to a Linux collection server that persisted and aggregated sensor data for analysis
- Defined sprint goals, assigned tasks, and coordinated code reviews, delivering a working end-to-end system on schedule
- Continuing as project stakeholder for the second-year build: setting requirements, scoping a full software rewrite, and advising the incoming team on architecture and sensor integration

CarPi — Vehicle CAN Bus Telemetry System | Personal Project (in progress)

Python, Linux, SocketCAN, Raspberry Pi, MCP2515 CAN controller, Git

- Building a headless Raspberry Pi unit that captures live CAN bus traffic from a vehicle's OBD-II port using an MCP2515 CAN controller and the Linux SocketCAN stack
- Configured the device as a self-contained Wi-Fi access point for in-vehicle capture, administered headlessly over SSH with no internet dependency
- Designing the analysis layer to decode raw CAN frames into engine parameters and compare logged runs using pandas

QueryShield — Big Data Privacy Framework | Big Data Analytics Course

Python, SQL, Git

- Implemented differential-privacy style noise insertion and data filtration layers to limit sensitive data exposure in query results
- Designed filtering logic enforcing access controls on query output without degrading analytical utility; integrated via a Git branch-and-review workflow

EXPERIENCE

IT Support & Infrastructure Deployment Intern | OneSparq | Cleveland, OH | 05/2024 – 08/2024

- Deployed and configured IT infrastructure for Cleveland Metropolitan School District under a third-party engagement, supporting hundreds of end users across multiple school sites
- Diagnosed hardware, networking, and software issues in the field; escalated complex incidents and documented resolutions into a reusable knowledge base
- Coordinated with district IT staff and faculty to sequence rollouts around class schedules, meeting tight deployment deadlines with minimal classroom downtime

Warehouse & Logistics Associate | Corrigan Moving Systems | Northeast Ohio | 2022 – Present

- Manage intake, retrieval, and organization of inventory in a warehouse holding roughly 150,000 boxes across long-term client accounts
- Execute residential moves and hospital equipment logistics on strict schedules, handling fragile and high-value items
- Selected for repeat high-value assignments over 4+ years; work independently and coordinate with small crews on client sites
